

ABSTRACT

The invention disclose: Chinese spelling scheme, Chinese alphabetic writing and Phonetic Symbols scheme. The Chinese spelling scheme which is used English letters to mark the tones, it is reduced to 5 sound symbols of the monosyllabic words from 6 spelling letters of other schemes at most. Between the syllables is clearly demarcated. It can be used as marks in sound and tone for Chinese characters, and also can form an alphabetic writing independently which follows the law of international languages. It's highly integrated with word, sound, and code which can be displayed each other and converted each other. It can be translated directly with the Chinese-language sentence and foreign languages. The Phonetic Symbols do not go beyond the range of 26 letters and symbols of common used English keyboard, which can not only be used to mark in English and other languages, but also can be used as a phonetic symbol written language independently.
